

Manpower Tracking System - Proposal

Objective: Replace manual Excel tracking with a digital system to improve efficiency, accuracy, and reporting.

Key Features:

- Worker login using Civil ID and Company
- Auto-fetch worker details from database
- Submit daily work details (location, incharge, permit receiver)
- Supervisor updates working hours
- Admin dashboard with reports (daily, monthly, yearly)
- Export data to Excel

System Workflow:

1. Worker logs in and submits work details
2. Supervisor updates working hours
3. Data stored in centralized database
4. Admin views and exports reports

Technology Stack:

- Backend: Flask (Python)
- Frontend: HTML, CSS, JavaScript
- Database: MySQL
- Reporting: Excel export using Python

Benefits:

- Eliminates manual Excel work
- Reduces errors
- Real-time tracking
- Easy report generation

Implementation Plan:

Phase 1: Requirement & Database Setup

Phase 2: Worker Module Development

Phase 3: Supervisor Module

Phase 4: Admin Dashboard

Phase 5: Testing & Deployment

Timeline:

- Total Duration: 3–5 weeks
